At times when I'm required to wrestle  
integrals then I prefer  
the functions named for Friedrich Bessel,  
modified or regular.

When integrals turn into J's  
or series built from I-sub-n  
I'm happier than on those days  
the letter F pops up again.

Their MATLAB functions work, I find.  
I, J, F, K all get it done.  
And I can't tell you why I mind  
the hypergeometric one.
